

Table 2 | RQ2 regression results

Model / predictor	Estimate	CR1 SE	95% CI	t	p
M0: Intercept	0.007336	0.001900	[0.003604, 0.011068]	3.861	1.26e-04
M0: Contextual preference	0.003249	0.000620	[0.002032, 0.004467]	5.242	2.27e-07
M1: Intercept	0.008479	0.002014	[0.004523, 0.012435]	4.210	2.98e-05
M1: Context increment	0.002611	0.000676	[0.001283, 0.003939]	3.863	1.25e-04
M1: Word-only preference	0.003730	0.000680	[0.002396, 0.005065]	5.489	6.16e-08

Both models: 595 target items; 553 source-sentence clusters; t reference df = 552.
Outcome: continuation alignment. OLS estimates; CR1 clustered uncertainty; two-sided p values.
M0: $R^2 = 0.0402$. M1: $R^2 = 0.0462$. Preference predictors are measured in nats.
